

**JMF** *Audio*

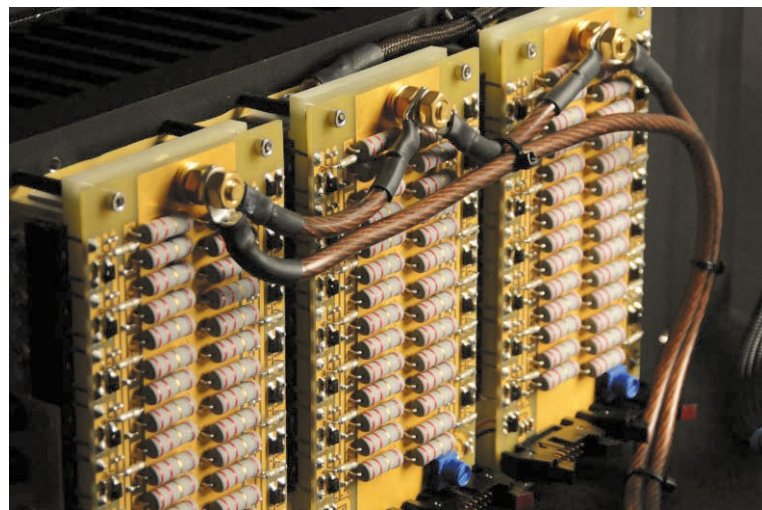

Manufacture de France, depuis 1985

power amplifier, Orose ® case, black or silver

LDA driver board - HQS 9001 mono amplifier

MTP output stage - HQS 9001 mono amplifier

### Analog electronics

HQS 9001, HQS 7001, HQS 6002 power amplifiers

PRS 1.5 line pre-amplifier

PHS 7.3, PHS 7.2 phono pre-amplifiers

PCD 302, PCD 102 power line conditioners

MBR 1 remote control

### Cables

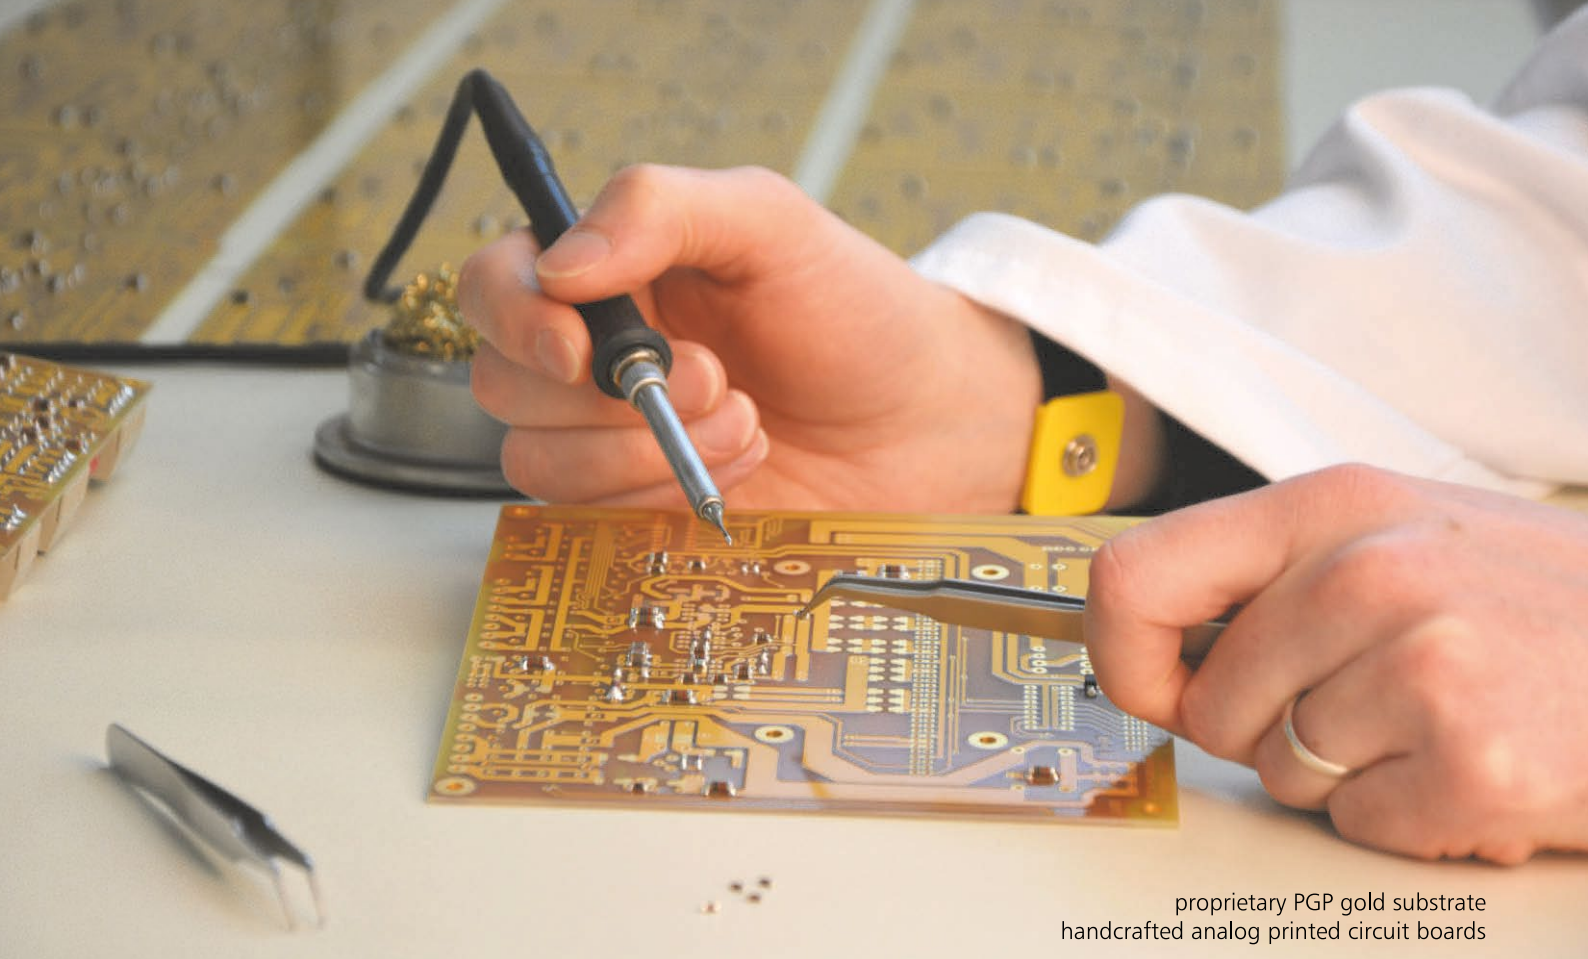

SR8, SR4 speaker links

CM8, CM4 line interconnects

CM4 PHONO tone arm to phono pre-amplifier

DP5 digital balanced interconnect

PC3 power cord

proprietary PGP gold substrate  
handcrafted analog printed circuit boards

## **Heritage... from the world class recording studios**

Soundville Studios, Luzern, Switzerland. The passionate studio owner and main engineer asked for the evaluation of the JMF Audio power amplification technology for the control room in 1988 (the isolated room in which the sound engineer and the producer evaluate the technical choices and monitor the overall sound result). A never experienced natural sound filled the room. Tom Hidley, the most influential and respected recording studios designer, was advised to come and listen.

Nashville, USA, the music city, 1989. The greatest studio complex, designed by Tom Hidley, was the place where critical measurements and sound evaluations of the purpose designed JMF Audio mono amplifiers had to take place. Comparisons with the installed and trusted Swiss made mono blocks were carried on by the highly focused engineers... After one day and one night of evaluations, the engineers declared that Jean Marie Fusilier's creation was more faithful... The studios owner and Grammy Awards winner instantly acquired several power amplifiers. The reputation of the studios had to be preserved.

JMF Audio has continued to cooperate with the leaders. Other instruments for the music complemented the offering for the professionals and the music lovers who put music first. One notable reference being Lindberg Lyd studios (2L), Norway, Grammy Award winner counting 39 nominations to date, which integrated JMF Audio's mains conditioner in their recording process in 2016...

## **When science meets the art for the music lover**

Headed with passion by a family of engineers, with understanding of the music production processes, continuously investing in research and development, JMF Audio has developed a collection of reference elements, starting with the power amplifiers. Each element being absolutely optimized for its function, capitalizing on experience and always looking for the most relevant solutions for the music. No more, no less.

JMF Audio believes that only precision can guarantee the desirable musicality and expression for all musics. In addition to excellent measurement figures, it involves a subtle convergence of scientific rigor and craftsman's work of art to reach the pinnacle in musical rendering: the three dimensional sound stage, the accurate timbres, the subtle ambiances, the fullness, the emotion. Only few parameters are measurable with traditional methods and this is where knowhow makes the difference.

The products and the components are designed in-house and assembled by our experienced technicians. At last every unit is verified by listening in our studios after a burn-in period to ensure that the customer receives the best.

Each JMF Audio product brings the artists closer to the listener... We believe we make Instruments for the music ®.
